

### **Task 1B: This is part of your Assignment 30%**

**Open your “index.html” file from your OneDrive folder:**

1. Open the “index.html” file using **NotePad++**

**Add an external style sheet:**

2. Create a new blank document using NotePad++, save this file as “mystyle.css”. Make sure it is saved in the “stylesheet” folder (saved and One Drive and shared with your teacher).
3. Add the <link> tag and required attributes to the <head> section of your “index.html” page.
4. As you have saved your stylesheet in a separate folder called “stylesheet”, you will need to specify this when inserting the “href=” (e.g. *href=“../stylesheet/mystyle.css”*)
5. Save both your “index.html” page and your stylesheet. Keep both files open in NotePad++.

**Change your background properties:**

6. In your stylesheet, create a html selector to edit the body tag.
7. Use this selector to change the background color of your html page.
8. Experiment with changing the background color of:
  - Paragraphs
  - Headings
  - The html table

**Use Google images (or any other source) to locate a suitable background image for your page. Save this image to the “images” folder inside your root folder (Web Authoring) on your OneDrive.**

9. Insert the image background via your stylesheet.
10. If necessary, adjust the repeat of the image to suit your page.
11. If you have used a single large image which does not repeat, adjust the background-attachment of the image.

**Adjust text properties:**

12. Change the color of the text on your page, also see if you can change the color of the text within paragraphs or headings separately by using different selectors.
13. Use the transform property to transform the appearance of your text.
14. Adjust the size of your text. Please use the most widely supported method when doing so.
15. Create different sizes for different heading tags.

**Adjusting your font:**

16. Change the font for your entire HTML page by declaring a new font family in a fallback list. (Refer the link to ‘Font Reference List’ in the ‘Useful Links’ section of the class website or in the Additional resources section of Unit 2.)
17. Choose a different font for your headings. Again, declare your new font family in a fallback list.

**Submit file to teacher for feedback:**

18. As this is part of the overall assignment please ensure that all files are saved to **OneDrive**.
19. Go to your inbox, find the folder you created for the Web Authoring course and the email sent to you by your teacher – this email contains a link with your name on it.  
Click on the link (your name) and open the folder called **1\_assignment30**.  
Upload your index.html file into the folder called “file” and then upload any images used into the folder called “images”.

DO NOT DELETE YOUR FILES FROM YOUR OWN ONEDRIVE – YOU WILL CONTINUE WORKING ON THESE AS PART OF THE NEXT TASK. YOU ARE SIMPLY UPLOADING A COPY OF THEM TO YOUR TEACHER’S ONEDRIVE.

**DEADLINE:**
